

## braille & tactile signs available to order

The DDA contains wide ranging measures to combat discrimination that disabled people experience in their day-to-day lives. It is illegal for employers with 15 or more employees to discriminate against disabled people for a reason related to their disability. New buildings now automatically have facilities for the disabled designed into the new building. For existing buildings some facilities for the disabled are easier to provide than others. Braille signs are an ideal low-cost aid for the disabled and can provide the first step to conforming to the DDA.

Braille signs are produced in highly contrasting colours (between the letters/symbol and the background). The reason being that whilst only a small percentage of the population are blind, a much greater percentage of people are partially sighted - especially amongst the elderly. Braille signs should be used, if possible, wherever embossed characters are used. They are, by their very nature, always read up close and should be positioned where they can be easily touched. The ideal range of heights for positioning would be between 1300mm and 1600mm above finished floor level.

Braille Signs are available in the following finishes:

Aluminium (SA), Satin Stainless Steel (SSS), Polished Stainless Steel (PSS) and Gold Anodised (GA). Please add to item code when ordering.
